## **1. Project Description**

People who are in need of blood in critical situations, often unable to get blood due to unavailability in hospitals or blood banks. In many cases, people seek help from social networks by posting requests. Sometimes these requests do not even get much attention as the social sites are filled with tons of contents.

Taking this as an idea, this project is made to connect people who are in need of blood and can request directly for it. With one account people can donate and receive blood as well. People can in fact request blood for other persons who do not hold an account here. Request for donating or receiving will be notified to all other account holders. Security is maintained by connection building. One person can connect with another via chat system. Contact information is stored if added to contacts once trusted. Each transaction of donation and receival is counted, and other users can see this information for security purposes. One can search others by blood type and location or name. One can also delete his account if wanted.

## **2 .Project Features**

- User Account: Registered with phone number and basic user information
- Edit Profile: Uploads profile picture, changes user information or profile picture if needed, deletes account if wished
- Settings: Adds more information on availability (extra phone number and location)
- Folder: Holds health documents (e.g. blood reports, medical examinations) of user if user intends to show people only with connection
- Notification: Notifies all other account holders when donation or receival is requested
- Search: Allows users to search other account holders for receiving or donating blood
- Chat Box: Users can send message to request personally or other chatting purposes
- Contacts: Chat box gives the option to add sender/receiver to contact list, which allows to get contact information(e.g. phone number, area) and personal details(e.g. age, status) of receiver/sender
- Transactions: Records the transaction of donation or receival with date and to whom is given or from whom is taken, the number of donation or receival is shown in profile

## 5. Source of Database

create table registration

```
(
  fname          varchar(20) not null,
  mname          varchar (20),
  lname          varchar (20) not null,
  phone_number   numeric (11,0) not null,
  country        varchar(20) not null,
  division       varchar(20) not null,
  city           varchar(20) not null,
  area           varchar(30),
  date_of_birth  date not null,
  blood_group    varchar(5),
  gender         varchar(10) not null,
  weight         numeric (3,0) check (weight>45),
  status         varchar (15),
  password       varchar (20) not null,
  primary key    (phone_number)
);
```

create Table profile

```
(
  ID              varchar (20) not null,
  picture         varchar(50),
  blood_report    varchar(30),
  primary key (ID)
);
```

create table profile\_notification

```
(
  id              int(255) AUTO_INCREMENT,
  sender_ID       varchar(20) not null,
  notification     varchar(50),
  primary key (id, sender_ID, notification),
  foreign key(sender_ID) references profile (ID)
  on delete cascade
);
```

create table profile\_folder

```
(  
  id                int(255) AUTO_INCREMENT,  
  profile_ID        varchar(20) not null,  
  folder            varchar(30),  
  primary key (id,profile_ID, folder),  
  foreign key(profile_ID) references profile (ID)  
  on delete cascade  
);
```

create Table profile\_settings

```
(  
  id                int(255) AUTO_INCREMENT,  
  profile_ID        varchar (20) not null,  
  add_phone_number  numeric (11,0),  
  city              varchar(20),  
  area              varchar(30),  
  primary key(id,profile_ID, add_phone_number,city,area),  
  foreign key (profile_ID) references profile(ID) on delete cascade  
);
```

create Table success

```
(  
  ID                varchar(20) not null,  
  phone_number      numeric (11,0) not null,  
  primary key (ID),  
  foreign key (ID) references profile(ID) on delete cascade,  
  foreign key (phone_number) references registration(phone_number) on delete  
  cascade  
);
```

create table chat\_box

```
(  
  id                int(255) AUTO_INCREMENT,  
  sender_ID         varchar(20),  
  receiver_ID       varchar(20),
```

```

chat_ID          int(255),
message          text,
ctime           timestamp,
foreign key (sender_ID) references profile(ID) on delete cascade,
foreign key (receiver_ID) references profile(ID) on delete cascade,
primary key (id)
);
Create table contacts
(
id               int(255) AUTO_INCREMENT,
contact_ID       varchar(20) not null,
me               varchar (20) not null,
primary key(id),
foreign key (contact_ID) references profile(ID) on delete cascade
);
create table donation
(
id               int(255) AUTO_INCREMENT,
r_ID             varchar (20) not null,
d_ID             varchar (20) not null,
date_of_activity date,
status           varchar(20),
primary key (id),
foreign key (d_ID) references profile(ID) on delete cascade,
foreign key (r_ID) references profile(ID) on delete cascade
);

```

## 6.SQL Queries

```
1. $q1 = "INSERT INTO registration (fname, mname, lname, phone_number,
country, division, city, area, date_of_birth, blood_group, gender, weight,
status, password)
VALUES('$fname','$mname','$lname','$phone_number','$country','$division',
$city','$area', '$date_of_birth', '$blood_group', '$gender', '$weight', '$status',
$password)";
```

Description: after putting value in registration form . this query insert all the data to database

```
2. $id=uniqid();
```

Description: generates random id

```
3. $a = "INSERT INTO profile (ID) VALUES ('$id')";
```

Description: Insert id in profile table

```
4. $f = "INSERT INTO success (ID, phone_number) VALUES
('$id','$phone_number')";
```

Description: insert id and phone number in success id

```
5.$sql = "SELECT * FROM registration WHERE
phone_number='$phone_number'";
$_SESSION['phone_number'] = $phone_number;
```

Description: gets session phone number

```
6.$strSQL = $db->query("SELECT * FROM success WHERE phone_number="
. $_SESSION['phone_number']);
$_SESSION['id'] = $row['ID'];
```

Description: get session id

```
7.$c = $db->query("UPDATE profile SET picture='$picture' WHERE ID = '" .
$_SESSION['id'] . "'")
```

Description= Inserts profile picture in profile table

```
8. $ae = "UPDATE registration SET password = '$password' where  
phone_number=" . $_SESSION['phone_number'];
```

Description: Edit data in registration table

```
9.$msg = "wants to donate blood.";
    $d = $db->query("INSERT INTO profile_notification (sender_ID,notification)  
VALUES('' . $_SESSION['id'] . '' ,'$msg')");
$msg = "needs blood.";
    $d = $db->query("INSERT INTO profile_notification (sender_ID,notification)  
VALUES('' . $_SESSION['id'] . '' ,'$msg')");
```

Description: insert notifications in notification table as role requested

```
10.$n = $db->query("SELECT * FROM profile_notification WHERE sender_ID  
!="" . $_SESSION['id'] . "");
```

Description : shows notifications in profile page

```
11.$donate = $_REQUEST['donation'];
    switch ($donate) {
    case 1:
        $ai = "INSERT INTO donation(r_ID,d_ID,date_of_activity,status) VALUES(''  
. $_SESSION['id'] . '' ,'$i','$date','Donated')";
        mysqli_query($db, $ai);
        $ao = "INSERT INTO donation(r_ID,d_ID,date_of_activity,status)  
VALUES('$i','' . $_SESSION['id'] . '' ,'$date','Received')";
        mysqli_query($db, $ao);
        break;
```

Description: inserts into donation table for the donor and receiver

```
12.$d = $db->query("SELECT COUNT(r_ID) FROM donation WHERE  
((r_ID="" . $_SESSION['id'] . '' ) AND (status = 'Donated'))");
    $r = $db->query("SELECT COUNT(d_ID) FROM donation WHERE  
(d_ID="" . $_SESSION['id'] . '' AND (status = 'Received'))");
```

Description: Counts transaction and shows in profile page

```
13.$s = $db->query("SELECT * FROM profile_settings WHERE profile_ID="" .  
$_SESSION['id'] . """);
```

Description: retrieves data from settings table

```
14.$d = $db->query("DELETE FROM registration WHERE  
phone_number=" . $_SESSION['phone_number']) $dd = $db->query("DELETE  
FROM profile WHERE ID="" . $_SESSION['id'] . """);
```

Description: Deletes user account

```
15.$c = $db->query("UPDATE profile SET blood_report='$blood_report' WHERE  
ID = "" . $_SESSION['id'] . """);
```

Description: Inserts file name into profile (similar query for folder table)

```
16.$q = $db->query("SELECT * FROM profile_folder WHERE profile_ID="" .  
$_SESSION['id'] . """);
```

Description: shows folder files .

```
17.$s = $db->query("SELECT * FROM registration WHERE blood_group =  
'$blood_group'");
```

Description: searches by blood group.

```
18. $searchfield = $_REQUEST['searchbar'];  
    $ss = $db->query("SELECT * FROM registration WHERE blood_group=  
'$blood_group' AND ((fname like '%" . $searchfield . "%') OR (mname like  
'%" . $searchfield . "%') OR (lname like '%" . $searchfield . "%') OR (division  
like '%" . $searchfield . "%') OR (city like '%" . $searchfield . "%') OR (area  
like '%" . $searchfield . "%'))");
```

Description : search with string match

```
19.$query = "select * from success where  
phone_number="" . mysqli_escape_string($db,$phone) . """;
```

Description: retrieves id from phone number

```
20.$query = "select * from success where ID='".mysqli_escape_string($db, $id)."'";
```

Description: retrieves phone from id

```
21.$query = "select * from contacts where contact_ID='".mysqli_escape_string($db, $id)."'";
```

Description: Checks for contact id.

```
22.$sql2 = "select * from registration where phone_number='".getPhoneById($row['sender_ID']) . "'";
```

Description: matches phone number based on sender Id

```
23.$sql = "INSERT INTO chat_box (sender_ID, receiver_ID, chat_ID, message) VALUES('$sender_id', '$reciever_id', '$chat_id', '$message')";
```

Description: insert chat details in chat box.

```
24.$sql1 = "INSERT INTO contacts (contact_ID, me) VALUES('$contact', '$me')";
```

Description: insert connected ids into contact table.

```
25.if (!empty($add_phone_number) && !empty($city) && !empty($area)) { $aq  
= "UPDATE profile_settings SET  
add_phone_number='$add_phone_number', city='$city', area='$area' WHERE  
profile_ID='". $_SESSION['id'] . "'";  
    mysqli_query($db, $aq);  
  
    }
```

Description: Inserts extra informations of user

```
26.$s = $db->query("SELECT * FROM donation");  
    $i = $db->query("SELECT * FROM success WHERE ID = '"  
.$row['d_ID'] . "'");  
    $a = $db->query("SELECT fname,mname,lname FROM registration WHERE  
phone_number = '$p'");
```

Description: shows transaction records.

## 8. Conclusions

This project's purpose is to help people in medical needs as in many cases people had died due to not getting blood in due time. And instead of using various social sites for requesting blood or donating blood in blood banks not knowing if it is provided or not, this project can be used as a social site to help people personally.

Doing this project has made us learn the vast meaning of database and how to manage it. Designing and retrieving data from the original database. Learning different languages parallel and implementing those. Working in a group also taught us to think productively and how to work as a team. This also made us learn how to deal with uncertain problems and have patience with other members. All in all this whole project has enlighten us to think and make something innovative and present the new idea to the world.

Although we could not give the platform or enough features as we planned but in future we hope to bring this project to peoples' attention with more features, good front Design and proper security system, that people will be interested to use this and be benefited with.
